Municipios de Yabucoa y Yauco	41
Estadísticas de Desempleo por Áreas Puerto Rico	42

# INTRODUCCIÓN

## Estadísticas de Desempleo por Áreas (Local Area Unemployment Statistics)

LAUS (Local Area Unemployment Statistics) es un programa desarrollado por el Negociado de Estadísticas Federal en coordinación con el Negociado de Estadísticas del Trabajo de Puerto Rico. El objetivo del programa es producir estimados mensuales de fuerza trabajadora y componentes por áreas de mercado de empleo y municipios. El método utilizado se conoce como "Metodología de los pasos".

Las áreas de mercado laboral, según han sido definidas por la Oficina de Gerencia y Presupuesto Federal (Office of Management and Budget), son:

San Juan-Caguas-Guaynabo MSA	-Adjuntas
Mayagüez MSA	-Jayuya
Ponce MSA	-Las Marías
Aguadilla-Isabela-San Sebastián MSA	-Maricao
Guayama MSA	-Santa Isabel
Fajardo MSA	-Utado
San Germán-Cabo Rojo- MSA	-Vieques
Yauco MSA	-Culebra
Coamo MCSA	

## ¿CÓMO SE ESTIMA EL DESEMPLEO POR AREA DEL MERCADO DE EMPLEO?

El método que utiliza el Negociado de Estadísticas para estimar el desempleo se conoce como el "Population-claims share o "16 Steps Method" versión Windows LSSPLUS 2010 1.0. Esta técnica comienza con el conteo de los trabajadores desempleados que están cubiertos por los programas estatales y federales de compensación por desempleo. Además, se agregan aquellas personas desempleadas pertenecientes a industrias no cubiertas por el Programa de Seguro por Desempleo. El tercer componente es calculado a base de las personas desempleadas que entran por primera vez o que regresan a la fuerza trabajadora luego de un periodo de separación.

El desempleo cubierto se compone de un conteo de los reclamantes de seguro por desempleo: los que reclaman continuamente, los que agotan los beneficios por desempleo y de personas que reclaman los beneficios a los cuales tienen derecho. El cálculo de los agotadores se realiza mediante la aplicación de tasas de sobre vivencia a los conteos semanales que hacen de estos dos grupos.

El estimado de desempleo en las industrias no cubiertas se desarrolla separadamente para cada una de ellas. Los trabajadores no cubiertos por la Ley de Seguro por Desempleo son los que trabajan: por cuenta propia, con familiares sin recibir paga, en servicio doméstico privado y una pequeña porción del empleo en el gobierno.

Los estimados de desempleo para estos grupos son a base de una relación histórica ajustada por la tendencia observada por el empleo y el desempleo cubierto.

La tercera categoría de desempleados, los nuevos y los que reingresan a la fuerza trabajadora, no se puede calcular directamente del sistema de compensación por desempleo debido a que el periodo actual de desempleo de esas personas no está precedido por un período de empleo reciente. El estimado para esta categoría es desarrollado por ecuaciones que son función de: (a) el mes del año; (b) la magnitud del "Experienced Unemployed", (c) la magnitud del "Experience Labor Force"; (d) la proporción de la población joven en edad laboral.

Los estimados del área del mercado de empleo son ajustados a base de los datos de la encuesta de vivencias de Puerto Rico con el propósito de conformarlos a las definiciones y datos de empleo y desempleo para proveer una base uniforme entre los estados en la determinación de estos estimados.
